

ASMI JAIN

Software Engineer | Immediate Joiner

asmijain3014@gmail.com | +91 9413816361 | Bengaluru, India | [linkedin.com/in/asmi-jain-71a3ba212](https://www.linkedin.com/in/asmi-jain-71a3ba212) | github.com/asmijain

Software Engineer building enterprise-grade C#.NET desktop apps — ~85% processing-time reduction via multithreading and async data binding. Independently shipped a full-stack AI app end-to-end (FastAPI, React, LangChain, Groq), live, not a tutorial clone. SIH 2022 National Winner (Ministry of Coal, Govt. of India), against 1,000+ teams. Actively seeking **SDE / Backend / Full-Stack / AI roles** — **Immediate Joiner**.

TECHNICAL SKILLS

Languages: C#, C++, Python, Java, SQL

Backend: RESTful API, FastAPI, SQLAlchemy, PostgreSQL

Core CS: DSA, OOPs, OS, DBMS, Networks, System Design

Frontend: React, HTML/CSS

AI / ML: LangChain, Groq API, TensorFlow, OpenCV, YOLOv3

Frameworks: WPF, .NET

Tools & Cloud: Git/GitHub, Perforce, Docker, Firebase

WORK EXPERIENCE

Software Engineer — Celstream Technologies | Aug 2024 – May 2026 | Bengaluru

- **Performance Optimization:** Reduced document-processing time by ~85% using **C# multithreading (TPL)** and asynchronous data binding.
- **Scalable UI:** Engineered dynamic **batch loading** for **WPF DataGrid**, eliminating UI freezes for **1,000+ row** enterprise datasets.
- **Concurrency & Reliability:** Implemented **file-locking** and retry mechanisms to ensure safe concurrent document processing and prevent data corruption.
- **Desktop Application Development:** Built **MVVM-based** WPF features, including responsive layouts, reusable user controls, and event-driven interactions.

Project Trainee (Internship) — Celstream Technologies | Feb 2024 – Aug 2024 | Bengaluru

- Onboarded onto 100K+ line C++/C#/WPF production codebase; shipped 2 features under senior engineer guidance.

PROJECTS

Make Your Own Adventure Story AI | LiveDemo: adventure-story-ai-beta.vercel.app | [GitHub Code link](#)

React, FastAPI, LangChain, Groq/Llama3, JWT, PostgreSQL, Vercel, Render

- **AI Story Generation:** Developed an AI-powered interactive storytelling platform where LangChain and Groq LLM generate dynamic, branching narratives based on user choices using structured prompt engineering.
- **Backend & APIs:** Designed RESTful APIs with FastAPI and SQLAlchemy to manage story generation, persistence, and retrieval through a modular backend architecture.
- **Authentication & UI:** Implemented JWT-based authentication with bcrypt password hashing and protected FastAPI routes via dependency injection; rebuilt the React frontend with a dedicated login/register flow and persistent auth state.

Moving Vehicle Registration Plate Detection | Python, YOLOv3, TensorFlow, OpenCV, Tesseract OCR, Firebase

Smart India Hackathon 2022 — National Winner, Ministry of Coal, Govt. of India

- **AI Detection Pipeline:** Developed a real-time ANPR system for coal mines using **YOLOv3** to detect moving trucks and **Tesseract OCR** with OpenCV image preprocessing to accurately extract registration numbers under varying lighting and motion conditions, won nationally against 1,000+ teams.
- **Operational Analytics:** Built a **Firebase Realtime Database** pipeline to record truck movement events and compute operational KPIs, including loader waiting time, weighing time, and travel time for bottleneck analysis.
- **Model Development:** Fine-tuned **YOLOv3** on a custom dataset of Indian commercial vehicles and implemented TensorFlow-based preprocessing and evaluation pipelines to improve detection and OCR accuracy.

EDUCATION

B.E. Computer Science & Engineering — BNM Institute of Technology, Bangalore | 2021 – 2024 · CGPA 8.5/10

Std. XII (Science) — Sophia Girls Secondary School, Bhilwara | 2018 – 2020 · 90%

ACHIEVEMENTS & CERTIFICATIONS

- Hackathon 5.0 Runner-Up — IEEE-BNMIT Student Branch (2021); built a Mental Health App.
- Secretary, Student Council (12th Std.) — led a 12-member team across student governance and events.
